1. LINE chatbot's QR code:

2. LINE chatbot's ID: @369vuxzi

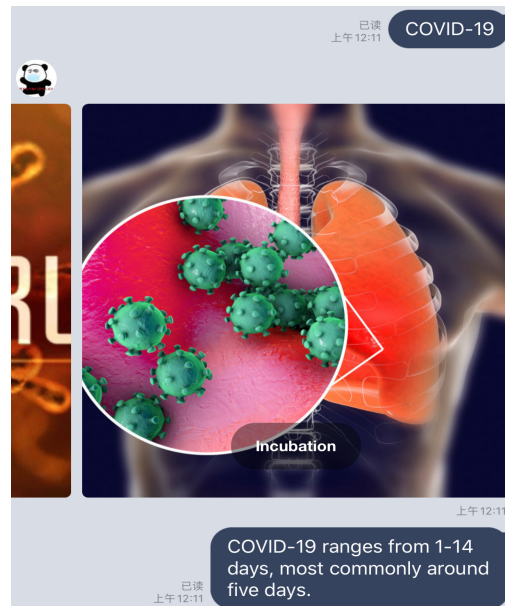

3. the function of chatbot:

The LINE chatbot is designed to provide the information about public health care. When user sends some key words about COVID-19, Incubation, etc. to the chatbot, it will send back some information about the key words to the user automatically. We use a redis server to store some persistent information.

(1) When user types message: “COVID-19” to the chatbot, it will send back two pictures with key words: “Introduction” and “Incubation”, and users can choose which one to click. When user clicks the picture with the key word “Introduction”, the chatbot will send back the introduction about the COVID-19.

When user clicks the picture with the key word “Incubation”, the chatbot will send back the information about the incubation period of COVID-19.

(2) When user types message: “mask” to chatbot, it will send back the place where user can buy the mask. The location can be linked to Google map for details.

(3) When user types message: “symptoms” to the chatbot, it will send back a video about the symptoms of COVID-19 and the solution to prevent the virus.
